DETAILED ACTION

Claim Rejections - 35 U.S.C. § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Huang et al (of record). Regarding claims 17-27, Huang teaches multiplexer 100 (figure 1) for line encoding input data into encoded binary signals and for sending the encoded binary signals to switch 130. The binary encoded signals includes a bit pattern (header bits) so that when the bit pattern is encoded it directly provides routing information (see col. 3, lines 47-55). The encoded binary signals (header bits) directly provides switch 130 with the routing information. Regarding claims 1-16, Huang further teaches that the switch copies the binary encoded signals at least for decoding (see the copying of header and routing bits by circuits 510 and 520).

3. Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.
